

Patient Safety

Reduce risk to focus on patients while creating positive outcomes.

Creating and delivering safe patient environments is a critical function in healthcare. By anticipating and preventing adverse situations versus reacting to them, it leads to positive care outcomes.

New Era Technology can help facilitate situational awareness by monitoring medical equipment, bed and patient risk status, and delivering that information directly to caregivers. Using digital signage, automated workflow, and integration with Electronic Medical Records, New Era can establish real-time communication platforms designed to protect the patient and facilitate optimum care.
